CATALOGUE CONTENT

	Page
General information	1
How to designate the product	2
TRANSFORMERS	3 – 23
SAFETY ISOLATING TRANSFORMERS	
• single-phase safety isolating transformers with the power between 0,05 and 2,5 kVA	3
• single-phase safety isolating transformers with the power between 0,05 and 0,5 kVA for fastening on rail TS-35	4
• single-phase safety isolating transformers with the power between 2,0 and 10 kVA	5
• three-phase safety isolating transformers with the power between 0,05 and 16 kVA	6
ISOLATING TRANSFORMERS	
• single-phase isolating transformers with the power between 0,05 and 2,5 kVA	7
• single-phase isolating transformers with the power between 0,05 and 0,5 kVA for fastening on rail TS-35	8
• single-phase isolating transformers with the power between 2,0 and 25 kVA	9
• three-phase isolating transformers with the power between 0,05 and 40 kVA	10
SEPARATING TRANSFORMERS	
• single-phase separating transformers with the power between 0,05 and 2,5 kVA	11
• single-phase separating transformers with the power between 0,05 and 0,5 kVA for fastening on rail TS-35	12
• three-phase separating transformers with the power between 0,05 and 10 kVA	13
POWER TRANSFORMERS	
• single-phase power transformers with the power between 2,0 and 100 kVA	14
• three-phase power transformers with the power between 10 and 1600 kVA class „F”	15-16
• three-phase power transformers with the power between 40 and 1600 kVA class „H”	17-18
SHIP TRANSFORMERS	
• three-phase ship transformers with the power between 10 and 250 kVA 50 Hz	19
• three-phase ship transformers with the power between 10 and 720 kVA 60 Hz	20
TRANSFORMERS FOR RAILWAY ENGINEERING	
• single-phase cast resin transformers for railway engineering	21
TRANSFORMERS FOR MEDICAL LOCATIONS	
• single-phase isolating transformers for medical location	22
• three-phase isolating transformers for medical location	23
POWER SUPPLIES	
• single-phase power supplies	24
• single-phase power supplies with reduced ripple factor	25
• three-phase power supplies	26
• three-phase power supplies with reduced ripple factor	27
CHOKES	
LINE CHOKES	
• single-phase line chokes	28
• three-phase line chokes 2%	29-30
• three-phase line chokes 4%	31-32
MOTOR CHOKES	
• three-phase motor chokes	33-34
DU/DT	
• Three-phase chokes du/dt for various frequency converters	35-36
CHOKES FOR FILTRATION	
• three-phase protective chokes for harmonics filtration in compensation systems 7%; 440V	37
• three-phase protective chokes for harmonics filtration in compensation systems 7%; 480V	38
• three-phase protective chokes for harmonics filtration in compensation systems 14%; 480V	39
• three-phase protective chokes for harmonics filtration in compensation systems 14%; 525V	40
SHUNT REACTORS	
• Three-phase shunt reactors for compensation systems for capacity reactive power	41-42
FILTERS	
• Three-phase LC filters for various frequency converters	43-44
ENCLOSURES	
• portable enclosure for single-phase transformers, IP-code IP23	45
• enclosure for single-phase transformers, horizontal mounted design, IP-code IP23	46
• enclosure for three-phase transformers, horizontal mounted design, IP-code IP23	47
• enclosure for single-phase and three-phase transformers, vertical mounted design, IP-code IP23	48
• enclosure for power transformers, horizontal mounted design, IP-code IP23	49
• enclosure for power transformers, horizontal mounted design, IP-code IP44	50
• enclosure for power transformers, horizontal mounted design, IP-code IP54	51

About Transmotor ApS

We are a Danish supplier of transformers. As a company we have been present on the market since 1977. We have built a strong brand, which is associated with reliability and high quality of offered products. The activity of our Company is aimed at helping the Customers and ensuring their full satisfaction. Due to our long-time experience and a very good workmanship of our products we are able to meet the increasing requirements of our Customers. Our transformers are used in devices operating in many countries around the world.

We produce dry-type low-voltage transformers intended for:

- power electronics,
- control, isolation, automatics ,
- shipyard and aircraft industries ,
- hospitals,
- railway engineering,
- mining, metallurgy and chemical industries
- military industry

We produce also the following types of chokes:

- line and motor chokes,
- limiting chokes du/dt
- shunt reactors,
- chokes for filtration,
- coupling chokes
- smoothing chokes

and DC power supplies.

QUALITY

Our transformers, chokes and power supplies are usually produced according to requirements of EN/IEC 61558, EN/IEC 60726, EN 60289 and EN/IEC 60076. Transformers from our company are recognized by Germanischer Lloyd, Polish Register of Shipping and Russian Maritime Register of Shipping. They can also meet the requirements of DNV, ABS, BV, RINA, GOST and LR. Since year 2000 the transformers has been produced in accordance to ISO 9001. The correctness of system functioning is confirmed by the certificate no 644/S/2008 issued by Zakład Systemów Jakości i Zarządzania . In year 2008 the factory obtained NATO approval, confirmed by certificate AQAP-2120 no 644/A/2008.

GENERAL TECHNICAL DATA

Our transformers, chokes and power supplies are usually produced with insulation class E(120°C), B(130°C) or F(155°C). Upon request we can manufacture transformers with different insulation classes e.g.: H(180°C) or heigher. Transformers designed to be assembled in control cabinets are made with the protection degree IP00 (without enclosure). On request we can produce transformers in metal enclosures with protection degrees IP23; IP44; IP54. Standard colour of painting - RAL 7032. Depending on agreed requirements transformers in enclosures and without enclosures can be prepared for assembling in different operation positions with windning terminals made in agreed design.

NORMAL OPERATING CONDITIONS

Unless otherwise stated, data presented in this catalog cards correspond to the continuous operation of devices at an altitude of 1000 m above sea level at the ambient temperature not exceeding 40°C. In addition to normal working conditions of the transformer is considered sinusoidal alternating power supply, 50 Hz. In the case of polyphase transformers, power supply voltages from the symmetrical supply . We can make transformers operating under different conditions, for example, at a frequency of 1000 Hz or the unbalanced load of phases. However, this requires the development of a special offer.

VOLTAGES AND TAPS

Secondary voltage values given herein refer to the nominal power load with the power factor $\cos \varphi = 1$.

For three-phase transformers these are voltages between the phase conductors (phase-to-phase voltages). If it has not been agreed before, the taps on the secondary side are made for the rated current corresponding with the heighest of the output voltages. Other requirements as regards the permitted taps load should be agreed separately.

ORDERS

You may improve the preparation of the manufacture process and shorten delivery time by specifying in your purchase orders data such as:

- type designation according to our catalogue,
- power,
- primary voltage (possible taps),
- secondary voltage (possible taps),
- load on separate taps,
- frequency,
- vector group (for three phase transformers),
- insulation class,
- ambient temperature,
- degree of protection,
- application,
- delivery time,
- shipment mode.

or you can use inquiry form published on our web side www.transmotor.com

Transformers Chokes Power supplies

HOW TO DESIGNATE THE PRODUCT

Example of transformer designation : ET1SM-1,16 220//24 TS-35

E	T	1	S	M-	1,16	220//24
trade mark	device	number of phases	type	design	power	rated voltages
E	T - transformer	1 or 3	S o - separating, power S2 - isolating, V1 safety isolating X - Scott's connection - changing number of phases - special	B - for thyristor controlled systems G - mining MED - medical KOL - railway M - maritime C - water cooled	power [kVA]	primary voltage [V]// secondary voltage [V]

Example of choke designation: ED3NM-0,05/100

E	D	3	N	M-	0,05	100
trade mark	device	number of phases	type	design	rated inductance	rated current
E	D - choke	1 or 3	N - line S - motor dU - limiting du/dt F - filtering (protective) 1W,2W - smoothing K - shunt reactor 2I - interface transformer	M - maritime G - mining C - water cooled	inductance [mH]	current [A]

Example of autotransformer designation: EA3M-25/50 400/200

E	A	3		M-	25/50	400/200
trade mark	device	number of phases	type	design	power	rated voltages
E	A - autotransformer	1 or 3	R - starting	B - for thyristor controlled systems G - mining M - maritime	core power/ rated power [kVA]	primary voltage [V]// secondary voltage [V]

Example of power supply designation: EZ3WM-1,0 230//24DC25

E	Z	1	W	M-	1,0	230//24DC25
trade mark	device	number of phases	type	design	power	rated voltages/ rated current
E	Z - power supply	1 or 3	W - with smoothing capacitor P - with 12-pulse circuit	M - maritime G - mining	power [kVA]	AC supply voltage [V]// DC output voltage [V] output current [A]

ADDITIONAL MARKING

Additional information useful for the proper production of products, please post at the end of the product designation or as your remarks

CE

Single-phase safety isolating transformers with the power range between 0,05 kVA and 2,5 kVA

ET1o

Design with screw terminals

Design with cable lugs

Technical data:

Design	Safety isolating transformers are produced in accordance with requirements of EN/IEC 61558-2-6 standard
Insulation class	B(130°C) - standard up to 1,6 kVA, F(155°C) - standard above 1,6 kVA
Climatic class / environmental class	C1/E0 - land design C2/E1 - maritime design
Ambient temperature	40°C
Protection degree	IP 00
Protection class	I
Frequency	50/60 Hz
Primary voltage	up to 1000 V
Secondary voltage	up to 50 V
Terminals	Screw terminals with nominal cross section from 1,5 mm ² up to 10 mm ² or cable lugs
Fastening	by means of base plate or angles

Safety isolating transformers are assigned for supplying electric devices with safe voltage.

In standard design, the transformers are adjusted to fastening by means of a base welded into core or screwed angles.

If agreed, the transformers may have more tappings. The windings terminals may be placed on one side only, or on both sides of a transformer.

Upon request, the transformers may be assembled in enclosures with the protection degree of IP 23, IP 44 and IP 54 with the possibility to insert supply cables through glands.

ET/2010/V/03

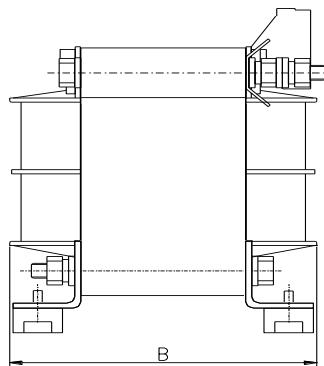

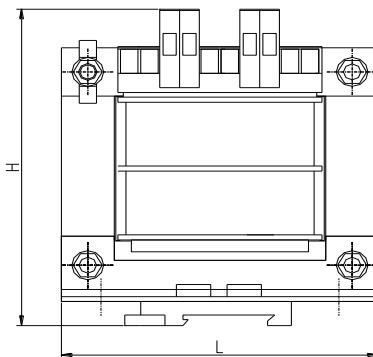

Design with quick-to-fasten clamp

Technical data:

Design	Safety isolating transformers produced in accordance with requirements of EN/IEC 61558-2-6
Insulation class	B(130°C) standard
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Ambient temperature	40°C
Protection degree	IP 00
Protection class	I
Frequency	50/60 Hz
Primary voltage	up to 1000 V
Secondary voltage	up to 50 V
Terminals	Screw terminals with nominal cross section from 1,5 mm ² up to 10 mm ² or cable lugs
Fastening	quick-to-fasten clamps for mounting rails TS 35 according to EN 50022

Safety isolating transformers are assigned for supplying electric devices with safe voltage.

Special quick-to-fasten clamp enables the quick and easy mounting on the rail according to EN 50022. If agreed, the transformers may have more tappings. The windings terminals may be placed on one side only, or on both sides of a transformer.

Design with the fastening adapter type GA35

CE

Single-phase safety isolating transformers with the power range between 2,0 and 10,0 kVA

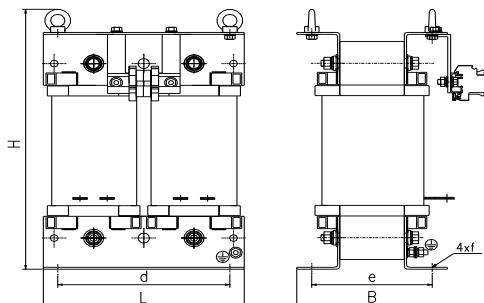

ET1o

Design A for the power up to 6,3 kVA

Design B for the power more than 6,3 kVA

Design B for secondary current above 300 A

Technical data:

Design	Safety isolating transformers produced in accordance with requirements of EN/IEC 61558-2-6
Insulation class	B(130°C) - standard up to 5 kVA, F(155°C) - standard above 5 kVA
Climatic class / environmental class	C1/E0 - land design C2/E1 - maritime design
Ambient temperature	40°C
Protection degree	IP 00
Protection class	I
Frequency	50/60 Hz
Primary voltage	up to 1000 V
Secondary voltage	up to 50 V
Terminals	screw terminal blocks with the cross section from 1,5 mm ² up to 150 mm ² or copper bus bars
Fastening	by means of angles

Safety isolating transformers are assigned for supplying electric devices with safe voltage.

In standard design, the transformers are adjusted to fastening by means of screwed angles.

If agreed, the transformers may have more tappings. The windings terminals may be placed on one side only, or on both sides of a transformer.

Upon request, the transformers may be assembled in enclosures with the protection degree of IP 23, IP 44 and IP 54 with the possibility to insert supply cables through glands.

Standard enclosures have powder coating - colour RAL 7032.

**Single-phase isolating transformers
with the power range between 0,05 kVA and 2,5 kVA**

ET1o

Design with screw terminals

Design with cable lugs

Technical data:

Design	Isolating transformers are produced in accordance with requirements of EN/IEC 61558-2-4 standard
Insulation class	B(130°C) - standard up to 1,6 kVA, F(155°C) - standard above 1,6 kVA
Climatic class / environmental class	C1/E0 - land design C2/E1 - maritime design
Ambient temperature	40°C
Protection degree	IP 00
Protection class	I
Frequency	50/60 Hz
Primary voltage	up to 1000 V
Secondary voltage	up to 500 V
Terminals	Screw terminals with nominal cross section from 1,5 mm ² up to 10 mm ² or cable lugs for rated current exceeding 61 A
Fastening	by means of base plate or angles

Isolating transformers are assigned for supplying electric devices, if separation of electrical circuits required.

In standard design, the transformers are adjusted to fastening by means of a base welded into core or screwed angles.

If agreed, the transformers may have more tappings. The windings terminals may be placed on one side only, or on both sides of a transformer. Upon request, the transformers may be assembled in enclosures with the protection degree of IP 23, IP 44 and IP 54 with the possibility to insert supply cables through glands.

ET/2010/V/13

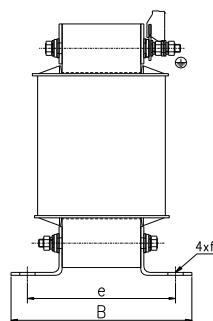

**Single-phase power transformers
with the power range between 2 kVA and 100 kVA**

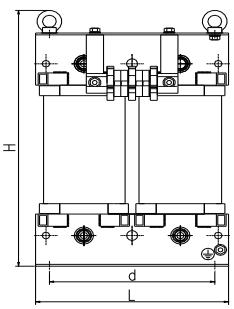

ET1S

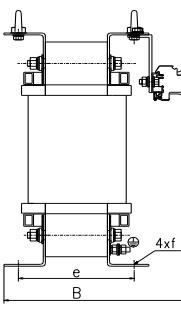

Design A for the power up to 6,3 kVA

Technical data:	
Design	Power transformers are produced in accordance with requirements of: EN/IEC 61558-2-1; EN/IEC 60726
Insulation class	B(130°C) - standard up to 5 kVA, F(155°C) - standard above 5 kVA
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Ambient temperature	40°C
Protection degree	IP 00
Protection class	I
Frequency	50/60 Hz
Primary voltage	up to 1000 V
Secondary voltage	up to 1000 V
Terminals	screw terminal blocks or cable lugs or copper bus bars
Fastening	by means of angles

Design B for the power above 6,3 kVA

Power transformers are assigned for supplying electric devices, and for application in various industrial branches. In standard design, the transformers are adjusted to fastening by means of a base welded into core or screwed angles.

If agreed, the transformers may have more tappings. The windings terminals may be placed on one side only, or on both sides of a transformer.

Upon request, the transformers may be assembled in enclosures with the protection degree of IP 23, IP 44 and IP 54 with the possibility to insert supply cables through glands.

**Three-phase ship transformers
with the power range between 10 kVA and 250 kVA 50 Hz**

ET3SM

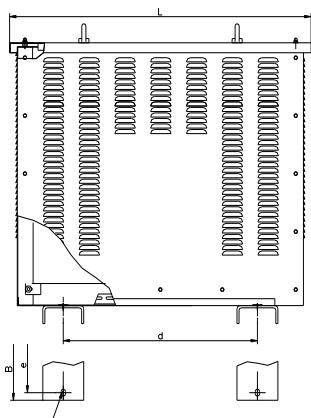

Fig. 1

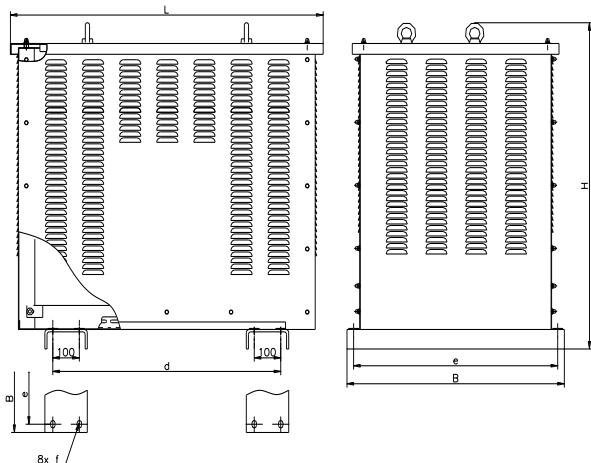

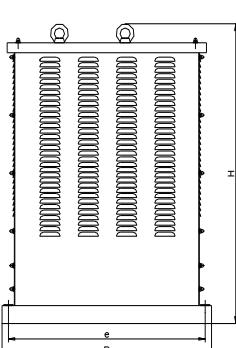

Fig. 2

Technical data:

Design	Transformers are manufactured in the maritime version C2/E2. They are manufactured as per EN 60726, EN 61558 and in accordance with the GL, PRS, RMRS, RINA, BV, LR, DNV and ABS rules, depending upon the requirements stipulated in a purchase order.
Insulation class	H(180°C)
Climatic class /environmental class	C2/E1 - maritime design
Ambient temperature	45°C
Protection degree	IP 23
Frequency	50 Hz
Primary voltage	up to 1000 V (as per agreement)
Secondary voltage	up to 1000 V (as per agreement)
Terminals	screw terminal blocks or copper bus bars
Fastening	by means of angles
Cooling	AN, air, natural
Arrangement	vertical

Three-phase ship transformers are assigned for supplying control and lighting circuits. In standard design they are assembled in an enclosure made of steel sheet with the protection degree of IP 23. The casing structure enables its quick disassembly and easy access to winding tappings. The main cables are directed through the bottom. The casings are powder painted in colour RAL 7032 (or other upon request).

Schematic diagram

Technical data:

Design	Single-phase isolating transformers ET1MED are produced in accordance with requirements of EN/IEC 61558-2-15
Insulation class	E(120°C)
Climatic class /environmental class	C1/E0 -land design
Ambient temperature	40°C
Protection degree	IP 00
Protection class	II
Frequency	50 Hz or 60 Hz
Primary voltage	230 V or 220 V
Secondary voltage	230 V or 220 V
Short-circuit voltage	< 3 % U _{RATED}
No-load current	< 3 % I _{RATED}
Leakage current	max. 0,2 mA
Inrush current	8 x I _{n RMS} (12 x I _{n max})
Terminals	screw terminals with the cross section 10 mm ²
Fastening	by means of angles

Isolating transformers type ET1MED are designed for power supply of medical locations (room group 2), in which there is a danger for health or live of patients in case of passage of a small current through a human body.

These transformers meet requirements of standard EN/ IEC 61558-2-15. Standard transformers have a reinforced (double) insulation and there is a shield placed between primary and secondary windings connected to an insulated terminal "S". Transformers are provided with two type of sensors for temperature control circuits: posistors type PTC and sensors PT1000.

Transformers have an additional central tapping "2M" to connect a relay for control of insulation condition.

Upon request, the transformers may be assembled in enclosures with the protection degree of IP 23, IP 44 and IP 54 with the possibility to insert supply cables through glands.

The fixing method of transformers has to ensure an electrical separation from the base plate (for example by means plastic support designed for rated voltage min. 2,5 kV).

In order to meet customer expectations we also deliver transfromers together with complete system, which monitors medical network IT

The delivered automatic switching system ensures:

- feeding the reserve supply
- control of basic and reserve voltages
- signalling of transformer load
- continuous monitoring of the IT system network insulation resistance
- earth fault localization and signaling
- monitoring of continuity of main circuits of contactor coils

ET/2010/V/23

**Technical data:**

Design	Power supplies are manufactured in accordance with the requirements of EN/IEC 61558
Insulation class	B(130°C) - standard
Ambient temperature	40°C
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Protection degree	IP 00
Protection class	I
Frequency	50/60 Hz
Primary voltage	up to 500 V
Secondary voltage	24 V DC (standard)
Terminals	screw terminals with the cross section up to 16 mm ²
Fastening	by means of angles

Single - phase DC supplies with Graetz's bridge rectifier are designed for users who need for their receivers an unstabilized DC voltage. DC-supplies are equipped with a LED indicating the current state of the operation. Standard designs of power supplies are prepared for mounting on mounting brackets. On request power supplies can be supplied with two types of protection: against fault and overload protection.

Design A
EI with screw terminalsDesign B
EI with cable lugs

Design C

Design D

**Technical data:**

Design	Chokes are produced according to : EN/IEC 61558-2-20; EN/IEC 60289
Insulation class	F(155°C) - standard
Ambient temperature	40°C
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Protection degree	IP 00
Frequency	50 Hz
Rated voltage	up to 750 V
Terminals	screw terminal blocks or cable lugs
Fastening	by means of angles

The ED1N line chokes are used in single-phase supply systems, usually for protecting power thyristors and transistors against rapid growth of current. Moreover, the line chokes limit commutation over-voltages in the circuit and backward current impulse amplitude when switching off thyristors. The line chokes also function as protectors of the supply network against higher harmonic propagation.

The range of possible versions is limited by the following equation:

$$0,05 < 2\pi f \times L \times I^2 \times 10^{-6} < 100$$

where: f - [Hz], L - [mH], I - [A]

Note:

Transmotor ApS reserves the right to make changes resulting from the continuous development of products offered.

If requested in advance, it is possible to manufacture a choke in other version.

For designs with climatic/environmental class C2/E1 the letter "M" ought to be added

Voltage drop	2% U_n					
Protection degree	IP 00					
Terminals	screw terminal blocks or cable lugs or copper bus bars					
Fastening	by means of angles					

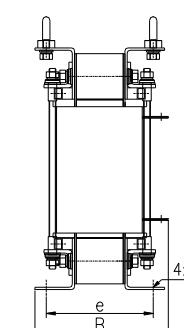

Design B

Design C

Design D

This design of chokes is mostly applied in three-phase power transmission inverter systems. These reactors limit the inrush current and restrict a mutually interference of inverters, which are supplied from the same transformer. The commutation in systems with motor chokes proceeds softly and overvoltages are suppressed.

Line chokes ED3N are simultaneous protective elements limiting the harmonics propagation.

In the table are given data for rated voltage 400V. The voltage drop during operation is 2%. The value of phase inductance [mH] can be calculated by an equation :

$$\text{where : } L = \frac{\Delta U_L \% \cdot U_n}{2\pi\sqrt{3} \cdot f_n \cdot I_n} \cdot 10^3 \text{ [mH]}$$

$\Delta U\%$ - voltage drop in % resulting from the choke inductance

U_n - rated phase-to-phase voltage [V]

I_n - rated current [A]

f_n - rated frequency [Hz]

It is possible after prior settlement to produce chokes with other technical data and in various designs.

Note:

Transmotor ApS reserves the right to make changes resulting from the continuous development of products offered.

If requested in advance, it is possible to manufacture a choke in other version.

For designs with climatic/environmental class C2/E1 the letter "M" ought to be added

Three-phase line chokes - 4%

$\Delta U=4\%U_n$, $U_n=3 \times 400V$

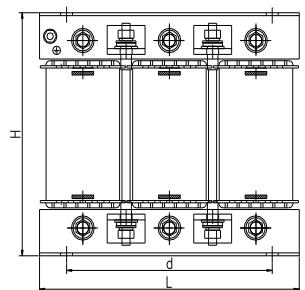

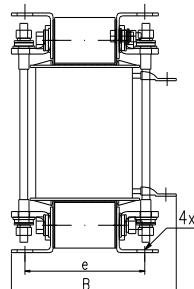

ED3N

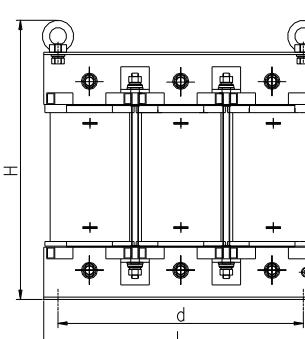

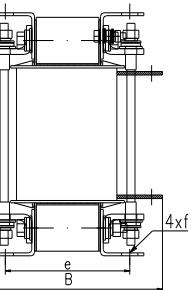

Design A

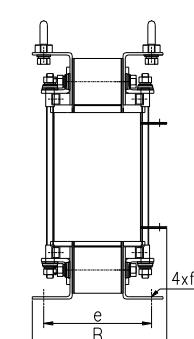

Design B

Design C

Design D

Technical data:

Design	Chokes are produced according to : EN/IEC 61558-2-20; EN/IEC 60289					
Insulation class	F(155°C) - standard					
Ambient temperature	40°C					
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design					
Harmonic number	1	3	5	7	11	13
Harmonic content (%) - I_{lh}	100	0	20	14	0	0
Phase shift	0	0	0	0	0	0
Frequency of 1-st harmonic	50 Hz					
Rated voltage	$U_n=400 V$					
Overload capacity	110% I_n					
Voltage drop	4% U_n					
Protection degree	IP 00					
Terminals	screw terminal blocks or cable lugs or copper bus bars					
Fastening	by means of angles					

This design of chokes is mostly applied in three-phase power transmission inverter systems. These reactors limit the inrush current and restrict a mutually interference of inverters, which are supplied from the same transformer. The commutation in systems with motor chokes proceeds softly and overvoltages are suppressed.

Line chokes ED3N are simultaneous protective elements limiting the harmonics propagation.

In the table are given data for rated voltage 400V. During the operation the measured voltage drop is 4%. The value of phase inductance [mH] can be calculated by an equation :

$$\text{gdzie : } L = \frac{\Delta U_L \% \cdot U_n}{2\pi\sqrt{3} \cdot f_n \cdot I_n} \cdot 10^3 \text{ [mH]}$$

$\Delta U\%$ - voltage drop in % resulting from the choke inductance

U_n - rated phase-to-phase voltage [V]

I_n - rated current [A]

f_n - rated frequency [Hz]

It is possible after prior settlement to produce chokes with other technical data and in various designs.

Note:

Transmotor ApS reserves the right to make changes resulting from the continuous development of products offered.

Three-phase motor chokes for various frequency converters

ED3S

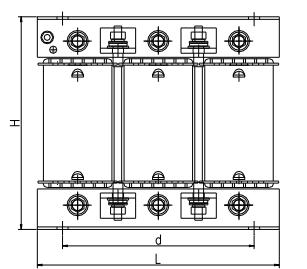

Design A

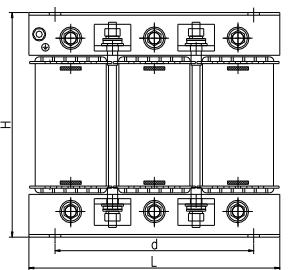

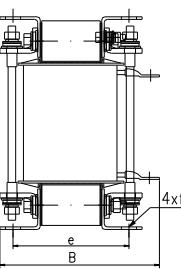

Technical data:

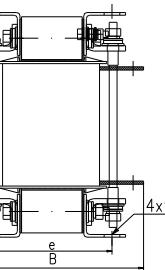

Design	Chokes are produced according to : EN/IEC 61558-2-20; EN/IEC 60289
Insulation class	F(155°C) - standard
Ambient temperature	40°C
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Frequency of the 1-st harmonic	50 Hz
Keying frequency	4000 Hz
Rated voltage	$U_n = 400 \text{ V}$
Overload capacity	110% In
Protection degree	IP 00
Terminals	screw terminal blocks or cable lugs or copper bus bars
Fastening	by means of angles

Design B

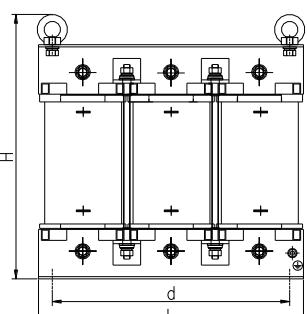

Design C

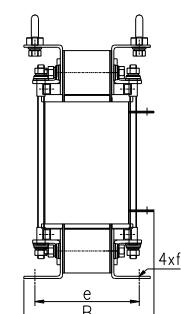

The ED3S three-phase motor chokes are used in converting driving systems of alternating current. Depending on the driving system type that they cooperate with, they have many tasks to fulfill: i.e. ensuring the motor current pulsation continuity and smoothing, limiting short-circuit current in the converter load circuit, as well as suppressing the commutation over-voltages and the supply line capacity compensation. It is possible to manufacture the chokes with various coil terminals like screw terminal blocks, cable lugs or copper bus bars, depending on the rated current.

The table presents selected parameters only for some of the chokes manufactured. The inductance values were selected basing on data given by various manufacturers of converters and drive units. If agreed beforehand, it is possible to manufacture chokes with parameters other than those given in the table.

Design D

CE

Three-phase chokes du/dt for various frequency converters

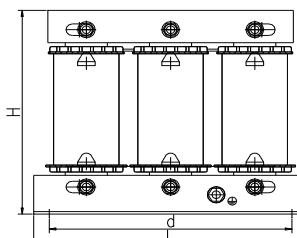

ED3dU

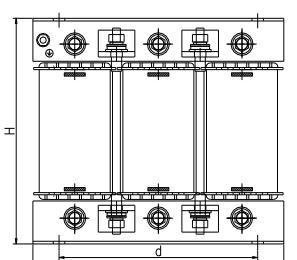

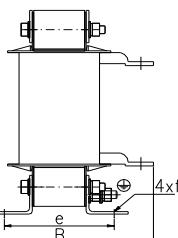

Design A

**Technical data:**

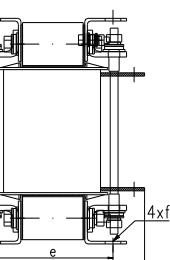

Design	Chokes are produced according to : EN/IEC 60289; EN/IEC 61558-2-20
Insulation class	F(155°C) - standard
Ambient temperature	40°C
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Frequency of the 1-st harmonic	50/60 Hz
Keying frequency	2-16 kHz
Rated voltage	$U_n=400$ V
Overload capacity	110% In
Short circuit voltage	0,7-1,2 %
Protection degree	IP 00
Terminals	screw terminal blocks or cable lugs or copper bus bars
Fastening	by means of angles

Design B

Design C

Chokes du / dt are applicable in driving systems in the output of frequency converters. The task of chokes du / dt is to limit the steepness of voltage rise. This feature increases the life time of the device by protecting the isolation from damage, reducing operating temperature and reducing motor noise. In addition they allow to increase the motor main cable length from 30 up to 100 meters depending on the keying frequency. These chokes also reduce the propagation of electromagnetic disturbances.

The series of chokes du / dt has been designed on the basis of output currents of the leading manufacturers of frequency converters. Their versatility lies in the possibility of operation at varying load at the inverter (with constant or variable torque).

If agreed beforehand, it is possible to manufacture chokes with parameters other than those given in the table.

Note:

Transmotor ApS reserves the right to make changes resulting from the continuous development of products offered.

If requested in advance, it is possible to manufacture a choke in other version.

For designs with climatic/environmental class C2/E1 the letter "M" ought to be added

**Three-phase protective chokes
for harmonics filtration in compensation systems p=7%
(rated voltage of capacitive battery 440V)**

**ED3F-
..*/400/7**

Technical data:

Design	Chokes are produced according to : EN/IEC 61558-2-20; EN/IEC 60938
Rated voltage of capacitors	440
Rated supply voltage	400 V
Frequency	50 Hz
Attenuation coefficient [p]	7% ($f_r=189\text{Hz}$)
Insulation class	F(155°C) - standard
Ambient temperature	40°C
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Protection degree	IP 00
Magnetic linearity	$I_{\text{LIN}}=1,15*I_n$
Thermal current	$1,06 \times I_n$

Chokes are assigned for operation in reactive power compensation systems to protect capacitive batteries. Together with capacitors, they form resonance systems which limit amplitude of harmonics currents. It is possible to manufacture the chokes with various coil terminals like screw terminal blocks, cable lugs or copper bus bars, depending on the rated current. There is also a possibility to insert sensors in windings, in order to protect the chokes against overheating.

Q_{LC} - rated reactive power of LC circuit (choke-capacitor)

U_C - rated voltage of the capacitive battery

U_{LC} - rated voltage of the LC circuit

L_N - rated inductance of the protective choke

P - attenuation coefficient

I_N - rated current of the LC circuit

Q_C - rated reactive power of the capacitive battery

Design A

**Technical data:**

Design	Chokes are produced according to : EN/IEC 60289
Rated output power	2 - 100 kVAr
Rated voltage	400V
Frequency	50 Hz
Protection degree	IP 00
Insulation class	F(155°C) - standard
Ambient temperature	40°C
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Terminals	screw terminal blocks or cable lugs
Fastening	by means of angles
Overheat protection	thermal switches

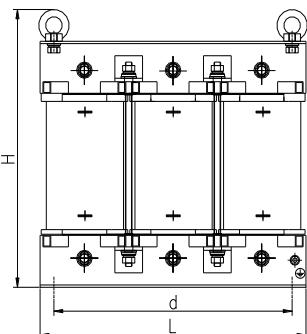

Design B

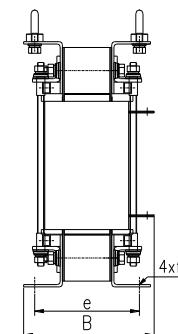

Three-phase shunt reactors type ED3K can be applied in compensation systems for capacity reactive power. This reactive power occurs in systems with synchronous machines and in vast, low and medium voltage cable networks.

The choke ratings are selected for typical used compensation systems. There is a possibility to produce reactors with other technical data after mutually settlement.

The fixing method of these reactors has to ensure an electrical separation from the base plate (for example by means plastic supports).

Design C

**Note:**

Transmotor ApS reserves the right to make changes resulting from the continuous development of products offered.
If requested in advance, it is possible to manufacture a choke in other version.

For designs with climatic/environmental class C2/E1 the letter "M" ought to be added

Technical data:

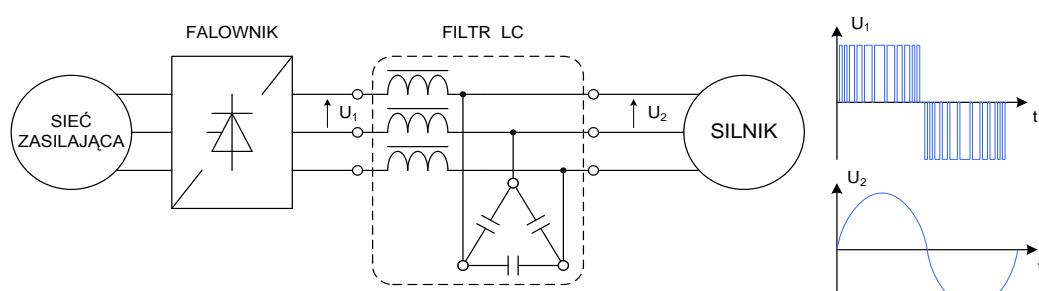

Design	LC filters are produced according to : EN/IEC 61558-2-20; EN/IEC 60289
Insulation class	F(155°C) - standard
Ambient temperature	40°C
Climatic class /environmental class	C1/E0 - land design C2/E1 - maritime design
Rated frequency	50 Hz
Keying frequency	≥ 4 kHz
Rated voltage	$U_n=400$ V
Harmonics content THDu in output voltage	$\leq 5\%$
Continuous overload capacity	110% In
Instantaneous overload capacity	150% In 1 min/h 200% In 0,5 min/h
Short circuit voltage	8 %
Protection degree	IP 00
Terminals	screw terminal blocks or cable lugs or copper bus bars
Fastening	by means of angles

EF3LC filters are used to protect the insulation of the motor and to increase its reliability. They also reduce noise level. These filters convert the output voltage signal of PWM inverter for sine wave at the same time eliminating the higher harmonics, which cause additional losses in both the mains cables of the motor and in the same motor. Sinusoidal output current and voltage of the filter allows for using of considerable lengths of cable without the need for shielding and full use of the active power of the drive system.

There is a possibility to produce the filter with various coil terminals like screw terminal blocks, cable lugs or copper bus bars depending on the rated current.

It is important to connect the filter properly, since the direct connection of capacitors to the inverter output may damage the system.

If agreed beforehand, it is possible to manufacture filters with parameters other than those given in the table.

Drive system with the output sinusfilter type EF3LC

Technical data:

Protection degree	IP 23
Colour	Standard - RAL 7032. Other colours on request

Enclosures EO 23 are designed for mounting of single phase transformers with rated power up to 1 KVA.

They are made of steel sheet and have powder coating in RAL 7032 colour.

In standard design in the front wall of the enclosure is installed following equipment: socket, lighted switch breaker, fuse. In the opposite wall is installed cord with UNI-SCHUKO plug 250V/16A. This type of enclosure is designed for assembling of safety isolating transformers.

for single-phase and three-phase power transformers IP23**

BG 23

Technical data:

Protection degree	IP 23
Colour	Standard - RAL 7032. Other colours on request
Cable outlets	In standard design cables are taken out via hole in the bottom of the enclosure or cable glands placed in front wall of the enclosure.

Enclosures BG23 are designed for mounting of single-phase and three-phase transformers with a rated power up to 1600 KVA.

Their structure enables an easy and totaly dismounting. Casings are fixed to the base by means of channel irons. They are made of steel sheet, which is protected against corriosis; steel sheet is degreased and phosphatized and has double epoxy -polyester powder coating. Fasteners have a protective coating. The bottom is made of perforated sheet.

Note:

Power ranges assigned to the types of enclosures overlap each other due to the large diversity of the transformer dimensions

transformers depending on the specific technical data (voltage, current rating, the type of receiver)

Transmotor ApS reserves the right to make changes resulting from the continuous development of products offered.

If requested in advance, it is possible to manufacture a choke in other version.

EO/2010/V/05

Technical data:

Protection degree	IP 44
Colour	Standard - RAL 7032. Other colours on request
Cable outlets	In standard design cables are taken out via cable glands placed in front wall of the enclosure.

Enclosures BG44 are designed for mounting of single-phase transformers with the rated power 450 kVA and three-phase transformers with a rated power up to 630 KVA.

Their construction enables an easy and totally dismantling. Casings are fixed to the base by means of channel irons. They are made of steel sheet, which is protected against corrosion: steel sheet is degreased and phosphatized and has double epoxy -polyester powder coating. Fasteners have a protective coating. The bottom is made of steel sheet.

Enclosures for single-phase transformers ET1S i ET1o
